

## Practice 6e Advanced Settings W10

1.- Have a look at administrative Tools. This includes different MMC, Microsoft Management Console. Insert here a screenshot with all the tools. “Screen1”.

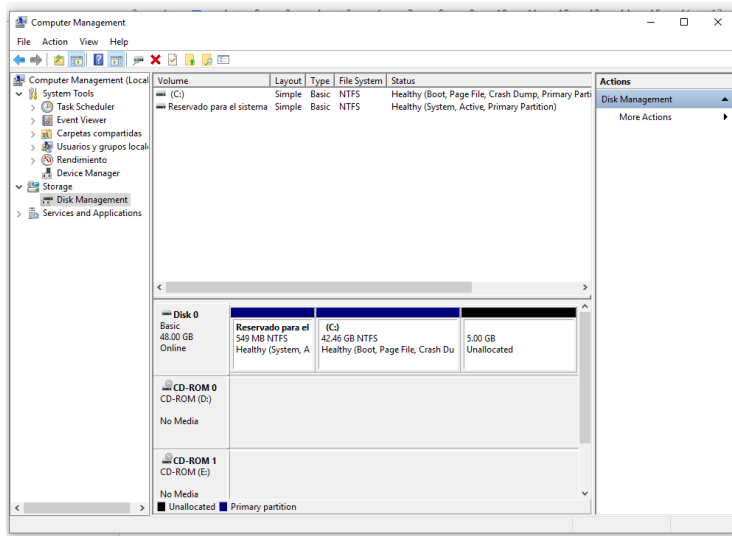

2.- Open the “Computer Management” tool, and access to “Disk management”. Your machine has 3 units C: D: and E: and 3 disks. Insert here a screenshot with the two partitions of the Basic Disk 0. “Screen2”.

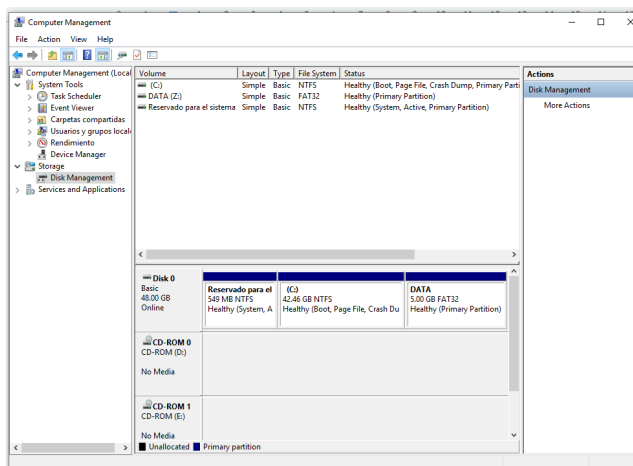

3.- For us the first partition is the Boot Partition, and the second is the System Partition. Although the names microsoft gives it are different.

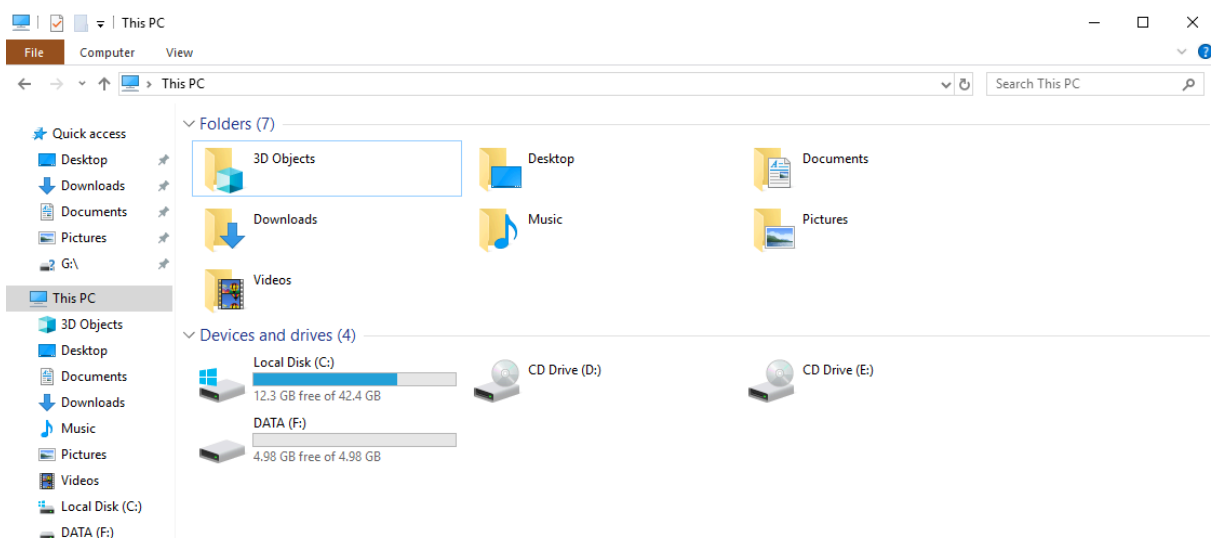

4.- At the moment we are going to use the disc in Basic Configuration. Shrink the System Partition in 5 GB exactly. The resulting partition will have 42,46 GB. Insert here a screenshot with the result of reduce the partition C. “Screen3”.

5.- Create a new partition(Simple Volume) in the free space, with 5 GB, Fat32 File System, and Volumen Label: "Data". "Screen4"

6.- Check which is the Z: drive of your virtual w10. "Screen5".

Hay otro que ya se llama Z(NAS), así que le llamamos F.

7.- Upload this text with all the Screens.
